

**Dear visitor,**

If you are a teacher, researcher, student, layman, curious or an enthusiast of the theme;

***It doesn't matter!***

In this work, we intend to make information both objective and reasoned and with good experimental basis available. However, In its first disclosure moments, there might be an article that may be a little more difficult to initially comprehend due to minor orthographic errors, broken or misdirected links, contradicting information, illustrations not appearing properly, and other edition problems...

Please, if you find any incorrect content, we ask that you contact us through the 'Contacts' Link by filling in at least the items with 'asterisks' on them. Your cooperation is very precious!

The 'Spatial Theory' has to be divulged and assimilated by the scientific society, as only then there may be a change in the way physics is taught at schools, which will certainly draw more students to this wonderful field of knowledge.

For that to happen, it is important the cooperation of people who have a compromise with themselves or society; to learn or to teach!

A good way of assimilating this treatise is through presentations in the form of lectures, be it in public or private schools (high school or college) to a minimum of 12 attendants.

We have, at this time, enough audio/visual material for up to 8 hours of presentations; which can be ministered in 3 or 4 stages. However, an event at least 2 hours long would be enough to demonstrate with practical examples, the 'Foundations' and many 'Conceptual Postulates'. More details can be requested via e-mail: [contato@unintel.net](mailto:contato@unintel.net)

**QUESTIONS ABOUT THE THEME**

In case you have any questions about the treatise or its coverage, please refer to the FAQ session in the link 'Questions' (located under the Link bar) to see if there already is another similar question. In case there is not, you must send your question via 'Contact' (idem); your question will be answered quickly.

Finally, if you enjoyed the contents of this work, was satisfied with our answers, and can imagine the difficulties faced to conclude a work of this magnitude here in Brazil, without any kind of financial support up until now... Do feel free to be generous and make any kind of contribution, which will be very welcome!
